

AH402F

High voltage bipolar latch Hall chip

1. Product Introduction

AH402F is a high-voltage bipolar Hall switch chip manufactured using a high-voltage bipolar process. The chip is composed of voltage stabilizing unit, Hall voltage generator, differential amplifier circuit, temperature compensation circuit and Open collector output circuit. Working mode: input Magnetic flux density and output digital voltage signal. The chip has the ability to withstand high voltage surges and has strong noise resistance; Suitable for various fields such as electronic consumption, automotive, and industrial control. Provide TO92S inline packaging, SMT SOT23-3L packaging, and all packaging meets RoHS standards.

2. Function

- Open collector output
- ESD: $\pm 4\text{kV}$
- Operating voltage: $3.0\text{V} \sim 60\text{V}$
- Overvoltage protection capability: 80V
- Maximum driving current : 30mA
- Output built-in $10\text{k }\Omega$ Pull-up resistor
- Operating temperature range: $-40^\circ\text{C} \sim 150^\circ\text{C}$
- Power pin reverse voltage protection

3. Application

- Brushless DC motor commutation
- Speed measurement
- Count
- Corner position detection
- Proximity detection
- Suitable for automobiles and extreme industrial environments

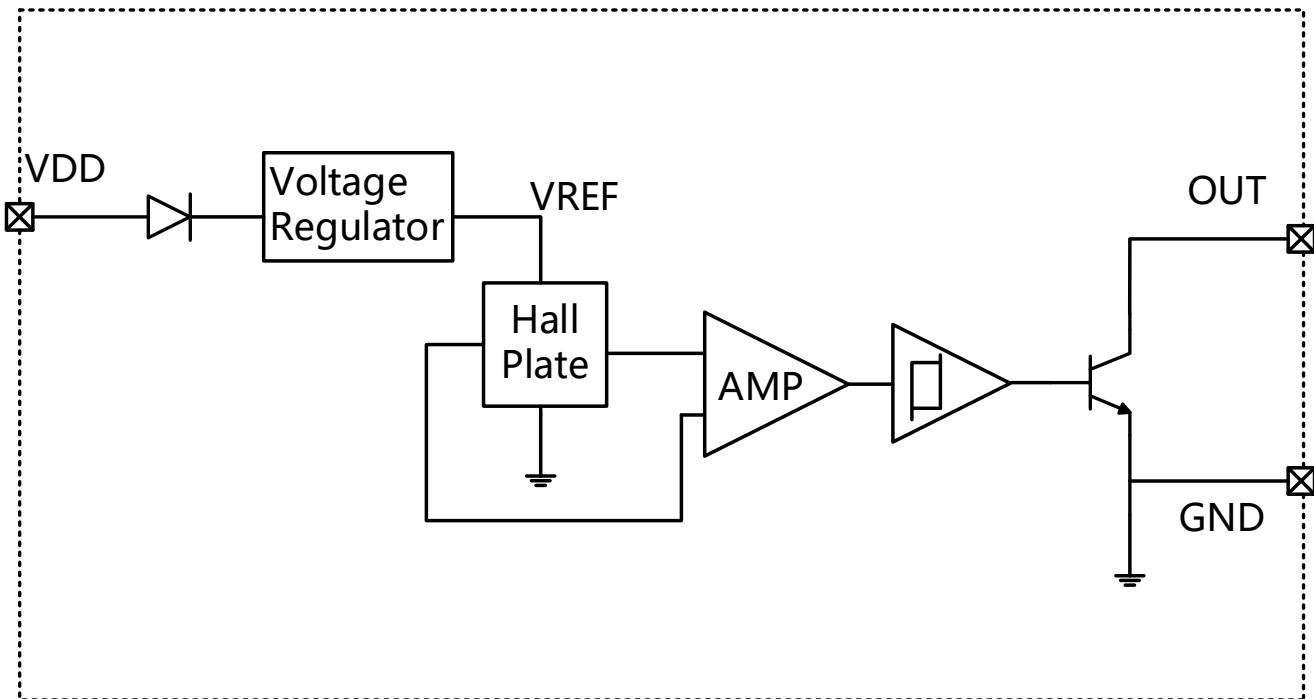

4. Product packaging

Part No.	Packages	Temperature range	Packing
AH402FUA	TO92S	$-40^\circ\text{C} \sim 150^\circ\text{C}$	1000/bag
AH402FSU	SOT23-3L	$-40^\circ\text{C} \sim 150^\circ\text{C}$	3000/ reel

5. Functional Block Diagram

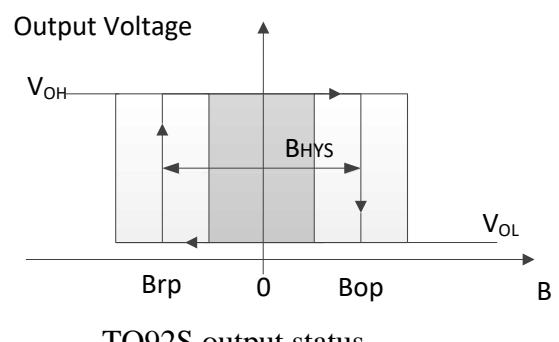

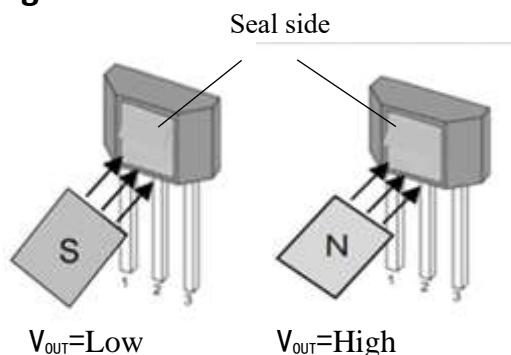

6. Pin information

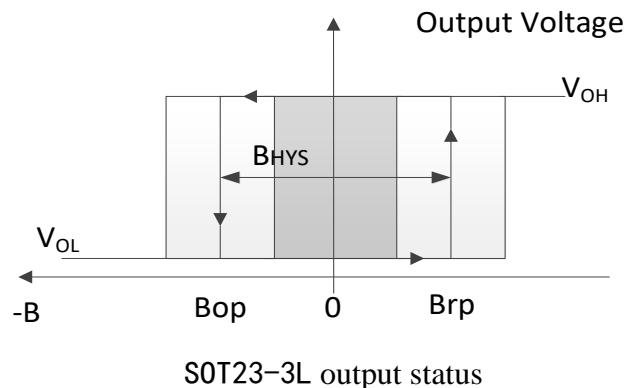

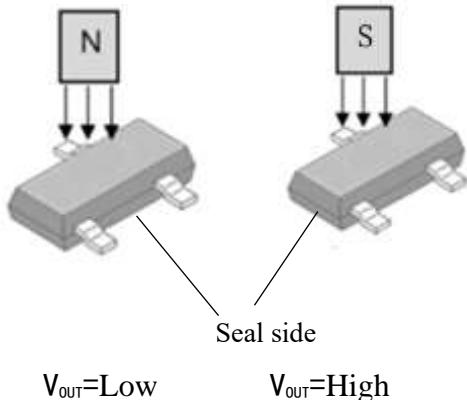

No.	Name	Functions
1	V _{CC}	Power supply
2	GND	Ground
3	V _{OUT}	Output

7. Magnetoelectric conversion characteristics

High voltage bipolar latch Hall chip

8. Limit parameter

Parameters	Symbols	Min	Max	Units
Power supply voltage	V_{CC}	-60	80	V
Output voltage	V_{OUT}	-0.5	80	V
Output current	I_{OUT}	0	40	mA
Operating temperature	T_J	-40	150	°C
storage temperature	T_{STG}	-50	165	°C

The absolute maximum rating is the limit value that a chip can withstand, and exceeding this value may cause permanent damage to the chip.

9. Electromagnetic characteristics

Test conditions: $T_J = -40^\circ\text{C} \sim 150^\circ\text{C}$, $V_{CC} = 3.0\text{V} \sim 60\text{V}$; Typical value test conditions: $T_J = 25^\circ\text{C}$, $V_{CC} = 5\text{V}$.

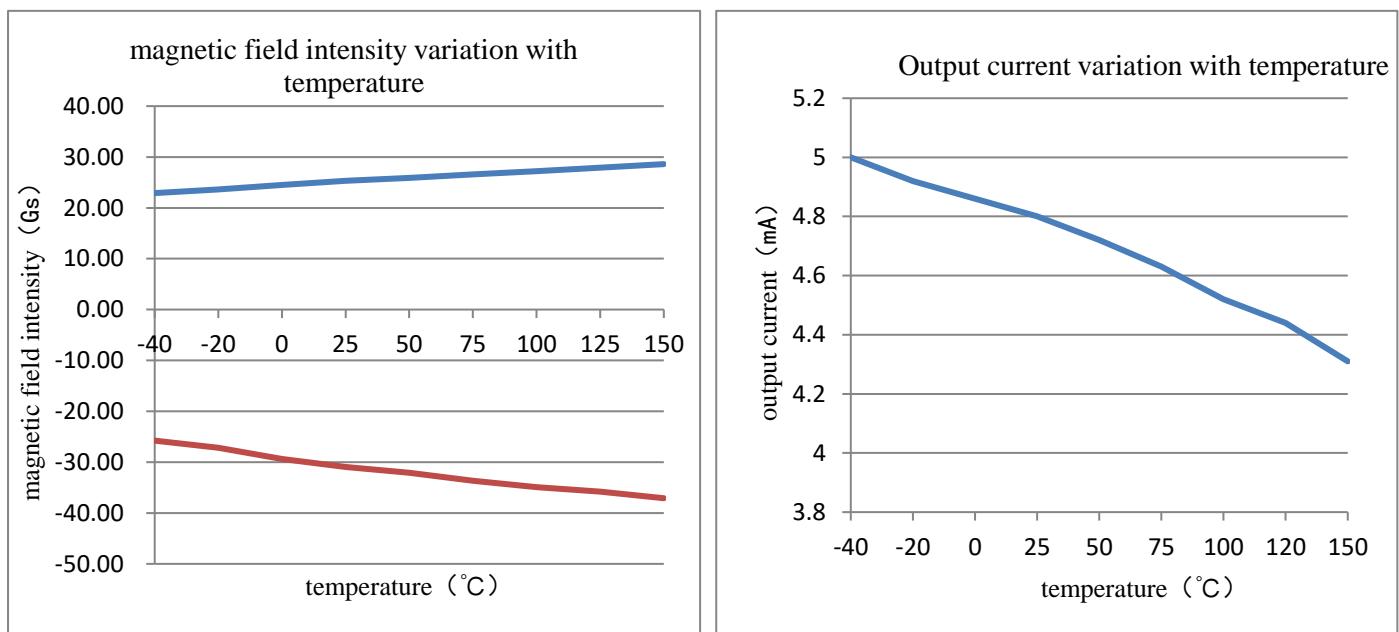

Parameters	Symbols	Test conditions	Min	Typ	Max	Units
Electrical performance						
Power supply voltage	V_{CC}		3.0		60	V
Power supply current	I_{CC}			4.8	8	mA
Output leakage current	I_{OLEAK}				10	uA
Output voltage	V_{SAT}	$I_{OUT} = 20\text{mA}$			0.4	V
Output current	I_{OUT}				30	mA
Output Rise Time	T_R	$C_L = 20\text{pF}$			1.0	us
Output Fall Time	T_F	$C_L = 20\text{pF}$			1.5	us

Magnetic performance						
operating point	B _{op}	C _L =20pF	10	25	40	Gs
release point	B _{rp}	C _L =20pF	-40	-25	-10	Gs
return difference	B _{HYS}	B _{op} -B _{rp}		50		Gs

10.Temperature Performance

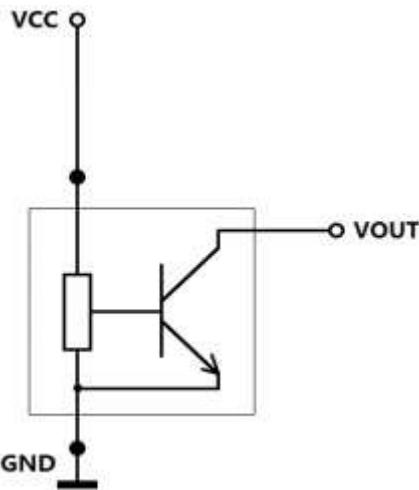

V_{CC}=5V, B_{op} and B_{rp} Characteristic Performance

V_{CC}=5V, operating current Characteristic Performance

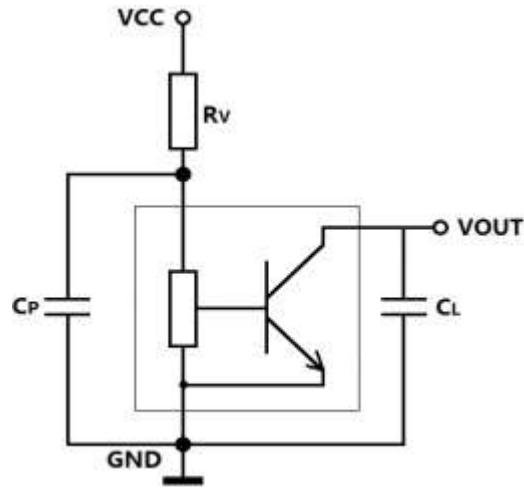

11.Application Circuit

The typical application circuit is shown in the following figure: Application Circuit 1, which can be applied to most circuits. Application circuit 2, where R_V=100 Ω, C_P=4.7nF, C_L=1nF, is suitable for circuits with interference or radiation interference on power supply lines. It is recommended to connect the resistor R_V and two capacitors C_P and C_L in series in the circuit, and place the resistor and capacitor components as close to the chip as possible.

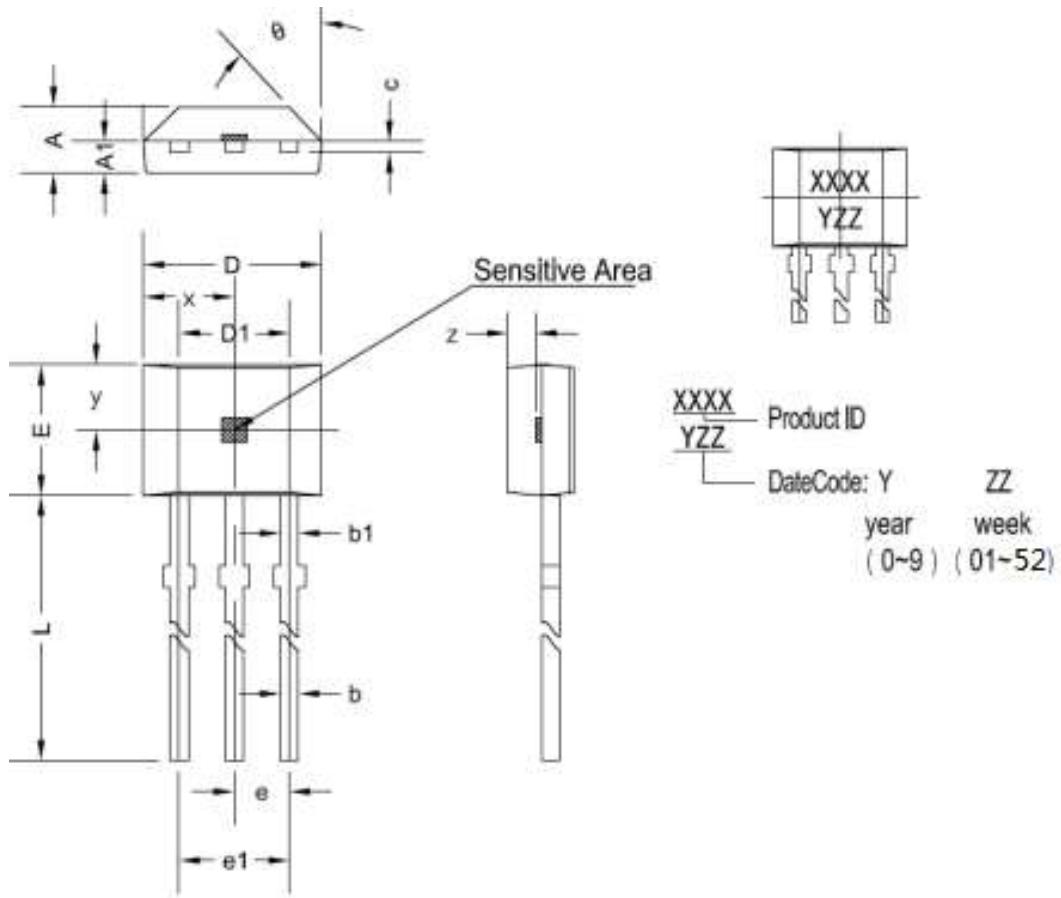

Typical Application Circuit 1

Typical Application Circuit 2

13.Historic version

Versions	Update date	modify
REV1.0	2020.07	
REV1.1	2022.07	Optimize the minimum working voltage to 3.0V and increase the temperature characteristic curve
REV1.2	2023.04	Layout and formatting

14.Notes

- Hall chips are sensitive devices, and electrostatic protection measures should be taken during use, installation, and storage.
- During installation and use, mechanical stress applied to the device casing and leads should be minimized as much as possible.
- It is recommended that the welding temperature should not exceed 350 °C and the duration should not exceed 5 seconds.
- To ensure the safety and stability of Hall chips, it is not recommended to use them beyond the parameter range for a long time.
